

Number 21.

## Large Crowd Attended The Y.M.C. Picnic

WAS HELD AT RIVER YESTER-  
DAY—GOOD PROGRAMME OF  
ATHLETIC SPORTS—DAY WAS  
GREAT SUCCESS

Weather conditions yesterday were ideal for the observance of the first holiday of the season. As a result almost every family in town was represented at the big picnic held at the

diver under the auspices of the Young Men's Club of the town. The day was one of the hottest so far this season, and all were glad of the opportunity to get out in the open for the day.

From early morning the town put on a holiday appearance, and by the time the first cars were ready to take the picnics to the grounds, a good crowd of old and young were on hand at the several places of meeting. All available cars in town were pressed into service, and by the time the last load was landed one of the largest crowds seen in Redcliff for some time

Ample provision was made for the entertainment of the picnickers. The refreshment booth was liberally patronized and proved quite an accommodation. Then there was the program of athletic sports which lasted all afternoon.

room and well into the evening. The several events for young and old were well contested, and all entered heartily into the spirit of the occasion. Prizes for these events were presented to the winners at the dance in Mac's hall in the evening. The dance was also under the auspices of the Y.M.C., and proved as successful as the day's outing.

The following is a list of the prize winners:

- Five aside football—Dick Pickering's team.
- 100 yards race, club members—J. Podesta.
- Men's race, open—J. Young.
- Ladies' sack race—Miss Tonks.
- Boys' sack race—K. Horn.
- Boys under 10 years—A. Wilkie.
- Boys' whilbarrow race—S. Horn.
- C. Walker.
- Egg and spoon race, boys—E. Vernon.
- Boys' three-legged race—R. Bergeron.
- Ch. E. Vernon.

High jump—A. Rutheford.  
Long jump—R. Duffield.  
Fat man's race—F. Luxton.  
Pillow fight—W. Rutherford.  
Men's three-legged race—J. Podesta.  
K. Horn.  
Men's wheelbarrow race—K. Horn.

Girls' race under 14 years—E. Ver  
non.

Girls' egg and spoon race—Miss L. Cockrell.  
Ladies' nail driving—Mrs. J. Berger on.  
Relay race—Horn Bros.  
Girl is under 10 years—M. Tonks.  
On the whole the day's outing was

One of the most successful held her for some time. The officers and members of the Y.M.C. are to be complimented for their enterprise and ability.

## War Memorial Was Unveiled Yesterday At Medicine Ha

Large Crowd in Attendance From Surrounding Country—Redcliff Band Furnished Music for Ceremony

Quite a number from Redcliff attended the unveiling of the war memorial in Medicine Hat Wednesday afternoon, and report an impressive and appropriate ceremony.

The Redcliff Military Band was present in a body, and besides furnishing several musical numbers left the singing for the several hymns on the

Brigadier General Bell performed the unveiling ceremony, after which wreaths were placed on the base by various units, organizations and individuals. Among these was a wreath

from the town of Redcliff and on from the G.W.V.A. of this town. Hon. Perrin Baker represented the Provincial legislature at the ceremony.

---

**BRITISH PREMIER  
AGAIN WINS SUPPORT**

Once again Lloyd George appeared in the house of commons to render, prime minister, an account of his stewardship at Genoa and once again after a precise and carefully worded statement and an eloquent rebuttal

The house, by an overwhelming majority of 235 to 26 rejected an amendment that would have required a two-thirds vote to remove a member of the House.

ment moved by Rupert Gwynne, unionist, to the motion on which the debate was based, as a means of expressing the dissatisfaction of the house with the premier's exposition. Mr. Gwynne had been most vehement in his denunciations of the government, asserting

n that the premier had spoken only  
what might have happened at Gen  
not what really did happen there.

## Liniments Won't Relieve Pain Between the Eyes

This pain is not rheumatism or neuralgia. Many folks think so—it is due to Catarrh, which inflames the fatty, and needs attention right now. Catarrh is a disease of the eye, a dermal infection that is daily fixing up chronic cases of weak throat, bronchitis and catarrh. Every breath through the inhaler is laden with soothing, healing substances that destroy all diseased conditions in the breathing organs. It can't fail to help, because it goes where the trouble really exists and it is the only remedy to cure an illness in the head or throat, by means of medicine injected into the stomach. There is no suffering from a gripply cold or any winter ailment that won't find relief in Catarrh, which is employed by Physicians, ministers, lawyers and public men throughout many foreign lands. Large sales last year in all costs. \$1.00. Small size 50c, sample size, all stockholders or the Catarrh-ron Co., Montreal.

## Canadian Teachers' Tour

Two Hundred and Eighty Teachers Will Comprise the Party

The teachers' tour to Great Britain and the Netherlands, France and Flanders is to be a memorable event for some two hundred and eighty teachers throughout Canada, and the plans which are nearing completion promise a "pleasure trip" of no small interest by any of the previous six annual tours over the Overseas Education League. Teachers from Australia, New Zealand and New South Wales will join with those from this Dominion in the arrangements for the summer. A special feature of this year's plan is the chartering of practically the whole accommodation of the Canadian Pacific line, "Hosanna," which carries with it all those privileges which guarantee the social and vacation pleasures of the seven day Atlantic voyage. Another attractive item on this year's itinerary is the visit to Oxford, Stratford-on-Avon and Warwick, for during that period the teachers have the unique privilege of hospitality in the Oxford colleges by generous permission of the college authorities, through Sir Herbert Warren, President of Magdalen College, Mrs. Haldane and Dr. W. G. Chubb, friends of the league. Arrangements have been made to accommodate the gentlemen of the party in the best hotels, and the ladies in Lady Margaret Hall and St. Hugh's College where, as temporary residents, they will dine in the College Halls and be given the freedom of undergraduates. It is not easy for the stranger to Oxford college life to appreciate the significance of this courtesy on the part of the college authorities, which is probably without a precedent in any institution, while at Oxford, specially arranged visits will be made to Blenheim Palace by invitation of the Duke of Marlborough, and to tea at Headington by invitation of Mrs. Morrell.

It is also confidently expected that a civic reception will be given to the visitors this year by the Lord Mayor of London in the Guildhall, with luncheon and a reception by the Lord Chancellor of England, Lord Birkenhead, who stands as one of the foremost and one of the youngest

leaders in the public life of Britain today. The programme for France will include a stay in Paris which promises the utmost interest, for the arrangements are being directed by La Bessiere, French Minister of Education, Marshal Poch is President, and Prince Roland Bonaparte the Vice-President. It is through their interest and influence and by the good offices of Madame Boas de Jouvanel, the Secretary-General, that the University of Paris will extend the hospitality of the colleges during the stay in Paris.

### Far Farming

Dr. Church Explains Why Fox Farming in the West Should be Profitable

Last week I told you what had been done by fox farmers on Prince Edward Island. This week I will give a few reasons why the west should be a better place to ranch foxes than the east.

The spring weather of the west is more favorable to the fox pup, during the months of February, March and sometimes April, fox pups are born. In the east during these months there is a considerable amount of rain and damp snow fall. The number of fox pups raised is more or less wet and when she returns to the den to her young they are subject to mumps or contract with this moisture and are often still and develop pneumonia, sometimes they die from this.

Now in the west you have clear dry sunshine during this period, which is certainly favorable to the fox pup. The number of fox pups raised should be from one-half to one and one-half per cent. higher in the west than in the east for the same reason. The same stock, other conditions being equal.

The average on P.E. Island is between two and three pups to the litter, depending on weather conditions chiefly. It should be between three and four pups to the litter in the west. Another condition favorable to the west is the available amount of food. The cost of food is about two, three and sometimes four times as much for most things that the fox pup will eat in the east.

Next week I will give other reasons why fox farming can be successfully carried on in the western provinces. Dr. W. G. Church, Inspector of Foxes for the Dominion Livestock Branch, Department of Agriculture, Headquarters, Summerside, P.E.I.

### Killed by Blood Poison

"Used an old razor for years but got a sore throat, because I was using a bottle of Putnam's Painless Cream. It was used for fifty years but has been removed, and was not worth the trouble. If you use 'Putnam's', refuse a substitute. 25c everywhere."

### World's Climate Changes

Has Been Maintained Ever Since Earth Was Formed

The first striking fact in the geological history of climate is that the present climate of the world has been maintained since the date of the earliest, named sedimentary deposits. The oldest sandstones of the Scotch Highlands and the English Longmynd show that "in pre-Cambrian times the winds had the same strength, the raindrops were of the same size, and they fell with the same force as at the present day. The same climate of the world has been fairly constant, though there have been local variations which have led to the development of glaciers in regions now free from ice, at various points in the geological past. That there has been no progressive chilling of the earth since the date of the oldest known sedimentary rocks is shown by their lithological characters, and by the occurrence of glacial deposits, some of which were laid down at low levels at intervals throughout geological time, according to the United States Geological Survey.

### May Apoptosis Run Greaser

Alberta sheep breeders left in line with those of Saskatchewan and the Eastern Provinces at their annual meeting in Edmonton, recently, when they decided to ask the Federal Government to appoint a man graded to grade the purebred lines brought to the annual fair sale. Although this will not mean that all the purebred runs offered for sale in the province will be graded, as is now being done in the Maritime it is a step forward in that direction.

### Trees About Prairie Schools

A short time ago very few school districts in the prairie provinces planted trees about the schoolhouses, but in the last three years the number has been steadily increasing. This year in Saskatchewan alone 150 school districts will plant trees. The seedling trees are obtained from the Dominion Forestry Nursery Station at Indian Head, Sask.

### Baku's Oil King

Rebuilding Fortune Ruined by Soviet Nationalization is Optimist Though Over 100

At the age of 101 years, Hadji Tagher, Baku's Framrose of King, which was ruined by Soviet nationalization of his property, has started to rebuild his fortune, where he began—as a stone mason.

Hadji Tagher is an optimist. "A man isn't old so long as he can work," he declared, and like a true Muslim he continues to dye his white beard brown.

He is a man of his years moments in learning to type. "For more than 80 years he had signed his name to business papers by making his mark with a blunt stick dipped in ink."

"One must keep up with the times," he explained to curious friends when the centenary began to take lessons. Tagher is known to Americans through his reception in his Baku palace two and a half years ago of the General James H. Harbord mission. He is known throughout Russia and the Middle East as an example of a poor man who became immensely wealthy, first as a house builder, and then, 60 years ago, through the purchase of a piece of oil land that yielded abundantly. This was in the days when oil was rather close to the surface and taken from wells in buckets.

When the Azerbaijan republic was founded by Moscow's revolutionaries converted into a children's orphanage and its treasures of art and tapestry scattered. In trying to take some of his silver plate and jewels to the country or to take care apparently laid with straw, a red sentinel at the outskirts of the city arrested and seized the escaping wealth. Tagher was beloved by the workers of Baku and was not harmed in prison.

He is now living in the village of Marda Khan, near Baku.

### Food for the Motor

Substitute for Gasoline Can Be Made from Waste Products of Paper Mills

There were sixty thousand motor vehicles in Canada in 1934. That figure had been increased to over two hundred thousand this year. These vehicles, if placed upon a highway, would form a procession 3,760 miles long. In other words, the first car to enter Windsor when the last one was just leaving Halifax.

It will be realized that these cars consume an enormous amount of gasoline. A conservative estimate places the quantity of "gas" consumed in Canada last year at nine million gallons, which would cost something like two and a half million dollars. The Council for Scientific Research at Ottawa has found that a valuable oil can be made from the waste product of Canadian paper mills. If you use "Putnam's" substitute for gasoline can be made from the waste product of Canadian paper mills. If you use "Putnam's" further experiments. It is believed that there will be an extensive movement to have cheap industrial alcohol also the place of the more expensive gasoline.

### Prepared for Worst

An Irishman who was signing articles on board a ship began to write poems with his right hand, and the changing the pen to his left hand, "disgusted it."

"So you can write with either hand," "Put" asked the officer.

"Yes, sir," replied Pat. "When I was a boy me father (rid his mouth) always said to me: 'Pat, learn to cut your finger nails ye right left hand, for some day ye might lose your right hand.'"

## HEART WOULD BEAT LIKE A TRIP HAMMER

Heart trouble has of late years become very prevalent. Sometimes a pain catches you in the region of the chest, now and then you get shortness of breath, palpitation, throbs, or beats with a rapid and irregular pulse. You think it is going to burst.

It is not heart and dry spells, sinking sensations, are nervous, irritable and depressed, and if you attempt to walk upstairs or any distance you get all out of breath.

We know of no remedy that will do so much to make the heart regain strength and vigor, regulate its beat and restore it to a healthy normal condition as Dr. Williams' Pink Pills for Pale People.

HEART AND NERVOUS SYSTEM. Mr. Charleswick, Dill, Ont. writes: "I had palpitation of the heart, and was unable to get on my feet. I was weak and up a hill, my heart would beat like a trip hammer. I weighed 150 lbs. I was dizzy-headed and had a sinking sensation as if my time were near."

Dr. Williams' Pink Pills for Pale People. I was weak and up a hill, my heart would beat like a trip hammer. I weighed 150 lbs. I was dizzy-headed and had a sinking sensation as if my time were near. I was weak and up a hill, my heart would beat like a trip hammer. I weighed 150 lbs. I was dizzy-headed and had a sinking sensation as if my time were near.

Price 50c a box at all dealers, or by mail from Dr. Williams' Pink Pills Co., The T. Milburn Co., Limited, Toronto, Ont.

Albanian Women Will Wear Dresses Troussers as the national costume for Albanian women are to disappear with the next generation. The Mohammedan men have been looking at this after seeing the smart, comfortable and sensible dresses worn by women members of the American Red Cross mission there, and observing the results of their work among the girls.

## GAS IN THE STOMACH IS DANGEROUS

Recommends Daily Use of Magnesia To Overcome Trouble, Caused by Fermenting Food and Indigestion

Gas and wind in the stomach accompanied by that full, bloated feeling after eating are almost certain evidence of the presence of excessive hydrochloric acid in the stomach. The stomach is called "indigestion." Acid stomachs are dangerous because too much acid irritate the delicate lining of the stomach, often leading to gastritis accompanied by indigestion, flatulence, heartburn, and sour, creating the disagreeable gas which distends the stomach and sours the human functions.

It is the worst of evils to neglect such a serious condition or to treat with ordinary digestive aids, which are almost certain to aggravate the stomach acid. Instead get from any druggist a few ounces of Epsom's Magnesia and take a teaspoonful in a quarter glass of water right after each meal. This will drive the acid and blast right out of the body, sweeten the stomach, neutralize the excess acid and prevent its formation and the stomach neutralizer the excess acid Magnesia (its powder or tablet form) is so common to the stomach, it is the least to the stomach, inexpensive to take and the best form of magnesia for stomach purposes. It is used by thousands of people who enjoy their food and are not over-indigestion.

### Band Instruments Wanted

Salvation Army at Regina to Organize its band

The Salvation Army is forming a Junior Boys' Band at Regina, and are sending out a call for young musicians. The purpose is to form a band of boys, thirty strong, who will eventually be promoted to the main organization as they grow older and gain more experience. It is believed that in numerous towns and villages and farm homes there must be many brass instruments that are not being used. The Salvation Army requests that these be sent along no matter what condition they may be in, and good use will be made of same. Any persons who may not be willing to donate instruments might write the Salvation Army, quoting the lowest figure they would be willing to accept. The lowest cost of instruments for band instruments could not be better than put them to this use. Instruments can be promoted by express to Adjutant C. H. Tutin, Salvation Army, 201 St. John St., Regina, Sask., or to Wm. F. deGruy, Bandman, 1306 Victoria Ave., Regina.

### Animal Freak Is Found

Zoologists are trying to classify a peculiar form of animal life found in Upper St. Lawrence River. The animal is like that of a catfish. The animal is of a spotted brown color and has a smooth skin. It has four legs, the feet being formed like human hands, but with only four fingers. The ears have four lobes, with a tuft on each lobe.

### Three of a Kind

Premier Dundas of Ontario, who was born in Leicester, England; Premier Oliver, of British Columbia, was born in Derbyshire, England; Premier Greenwood, of the Canadian west, was born in Lincolnshire, England. If this does not encourage immigration from England to the Canadian west, what will?—Toronto Star.

## Concerning Skunks and Other Things

"STELLA, dear," cried a Browne, breathlessly running to her from the direction of the Get Little Pool, "a rather large bird has just reached the End-of-the-Earth and wants to see you. We asked him his name, but he was so exhausted when he got here that he could hardly speak, and so we couldn't understand."

"Very well," Stella replied. "I'll go and see him. I suppose I had better bring my wand with me, for I am sure to be asked to make some wish come true."

When they arrived there, however, the third, thirty visitor had drunk so deeply of the Get Little Pool and had consequently become so little that they couldn't even and him until a faint call from him showed them where he was roosting in the lower branches of a tree near the pool.

"Hello!" bawled the Fairy. "Who are you?"

"I am a Hootin', was the answer that drifted down from the tree, and I'm so tired that I can't even get up to see you. I've been down all the way from South America and I'm not used to it."

"A bird that doesn't fly?" exclaimed Pinna. "Why, that's almost as unlikely as a fish that swims!"

"Here, here!" cried Stella. "It's all the same. 'I've been down all the way from South America and I'm not used to it.'"

"About those wonderful, sharp claws?" asked the Hootin' from behind Stella's skirts, but the Hootin' said no attention.

"How about those wonderful, sharp claws?" asked the Hootin' from behind Stella's skirts, but the Hootin' said no attention.

THE REDCLIFF REVIEW, THURSDAY, MAY 25, 1922.

## OF INTEREST TO RATEPAYERS

As will be seen in the new columns of this issue, notice has been received that the Finance Commission will sit in Redcliff on Tuesday, May 30th, for the purpose of reviewing the town's position and endeavoring to formulate some plan satisfactory to all concerned, for the carrying on of the town's affairs.

If this session is conducted along the same lines as the last, the commission will receive suggestions that may be brought forward by ratepayers for the information of the commission or the improvement of conditions. Any criticism of existing conditions would also be in order.

H. therefore, there are any ratepayers who have anything along these lines to offer they should be on hand next Tuesday. The session will be held in the Empress theatre.

## THE GAS QUESTION

The Calgary press seems to indicate that Medicine Hat and Redcliff are somewhat excited about the proposal to pipe gas from this field to Calgary.

From what we can gather the Calgary papers are unnecessarily alarmed, as we can find nothing in the council minutes furnished us by the town secretary to indicate that the council is taking any action in the matter whatever.

We have always been led to believe that our supply of natural gas in this field is inexhaustible, at least so far as the town is today are concerned. And we have believed it to the extent of being most prodigal in the use of it. Now that there is so much talk about it and so many envious eyes are looking this way we feel some pride in the fact that we have been so far from cognized as the centre of this gas supply for the cities of the province.

We have no doubt that our industries will be looked after and that all contracts for gas will be faithfully lived up to. Although there is gas in many places in Alberta, there is no doubt but that we are in the centre of the very largest gas field that was ever discovered in the world, since it is known that the gas at Many Island Lake is the same gas as ours.

Before the discovery of this gas at Many Island Lake the experts who gave evidence at the conference with regard to gas at Calgary, estimated the gas here in the field around Redcliff to be about one hundred and twenty billion cubic feet. To compute the number of cubic feet in this field now that we know it to include the territory so far as Many Island Lake would exhaust the multiplication table.

## CROW'S NEST AGREEMENT

Speaking officially on the Crow's Nest Pass agreement the Winnipeg Free Press says:

"It is only too evident that a powerful line-up is in process of being formed at Ottawa to bring about a further suspension of the Crow's Nest Pass agreement schedule. The policy to be pursued has been already mapped out in all probability; and the device of the parliamentary committee is intended to supply a color or of plausibility to the course which is to be followed.

The railways will make an alternative proposal involving certain freight rate reductions upon basic commodities to apply, possibly, over the whole Dominion;

the showdown comes we shall have no end of lofty speeches about the necessity of taking a broad national view of the question and in deprecation of the "selfish sectional" viewpoint of the West.

## BETTER-GROW SLOWLY

The proposition to bring 400,000 Ukrainians to Canada and settle them on farms in the west, is one which should be given serious consideration before any definite undertaking is entered into by the Dominion government. Such an immigration would mean that the bulk of them would settle in Saskatchewan and Alberta, and if they settled in colonies as in the custom in the past, it would mean that they would be in a large majority in many of the rural districts in these provinces. This in turn would mean that they would always be foreigners, at least for years to come, as far as habits and customs, ideas and ideals, are concerned.

It has proven a mistake to settle this class of immigrants in colonies in the past, but it would

be difficult to do otherwise if they were to come in such large numbers. Far better to grow a little more slowly and more surely.

## THE GENOA CONFERENCE

The dominant thought in Genoa as the delegations to the economic conference were leaving or packing their trunks preparatory to departing for their homelands, seemingly was that although the conference was a thing of the past, as far as Genoa is concerned, its achievements would live and contribute much to the pacification and reconstruction of Europe.

The officials of the smaller states undoubtedly will go home disappointed, perhaps angry, because their troubles to come, as far as they are concerned, have not been settled at Genoa. Lithuania, for example, is chagrined that Genoa has not chased Polish troops from Lithuanian territory and the small republics bordering on the Caspian and Black seas because Genoa failed to free them from Bolshevik rule. But, as a whole, the belief prevails that the conference, despite dis-

putes which almost pushed Europe to the edge of a precipice, has resulted in the beginning of better understandings between the nations of Europe, including Russia. Even official France admits this.

With the wheat board practically ditched for this year, and with a government which owes its success at the last election largely to the C.P.R., now in power, it looks as though the west will not come into its own for a whole while yet.

Calgary women are considering the advisability of refusing to use gas until its usage question is settled one way or the other. Wonder what the husbands will say to this when they have to start splitting kindling, carrying up coal and carrying out ashes.

Down in Los Angeles a young man married a widow with two

children. The widow's maiden name was Elizabeth. It will now be in order to say the young husband has a second hand "Lizzy" and two runabouts.

## Restaurant Act is Effective May 1st

The Restaurant Act, which comes into effect on the first of June, requires that all restaurants will have to operate under provincial license.

Mr. Brownlee expects good results from this act, which he believes will assist both in the administration of the liquor act and of the Lord's Day act. He is continually receiving applications for permits to operate under the Lord's Day act and under the restaurant licensing act. If complaints are constantly being received against certain restaurants, the owners can be put on probation, or if necessary the license cancelled. The same is true of violations under the liquor act.

The act provides that one who has been fined under the liquor act subsequent to May 1st will not obtain a license.

Ralph Piche, aged 26, was drowned while fishing at Lewis Lake, 15 miles from Hinton, A.S., Thursday.

## RAILWAY RATES AND IMMIGRATION DISCUSSED AT C.P.R. ANNUAL

President E. W. Beatty Deals With Important Matters Affecting All Canada in Address To Company's Shareholders

THE 41st annual meeting of the Canadian Pacific Railway Company was held at the Empress theatre in Medicine Hat on May 23rd, at which time the shareholders of the company met to discuss the company's affairs for the year ending March 31st, 1922. President E. W. Beatty, after welcoming the shareholders, presented a report on the company's earnings for the year, which showed a net income of \$1,000,000, a record for the company.

In his opinion, Canada cannot afford to be without a definite and far-reaching immigration policy. He urged that the government should take measures to attract immigrants, and that the railway company should be entitled to collect and handle immigrants who would be legal though not bearing the usual passport and visa requirements. He stated that the Canadian Pacific had been extending its service to the west, and that it was in a position to give equal facilities to immigrants from the west as it had been giving to immigrants from the east.

He also mentioned the fact that the company had been extending its service to the west, and that it was in a position to give equal facilities to immigrants from the west as it had been giving to immigrants from the east. He stated that the Canadian Pacific had been extending its service to the west, and that it was in a position to give equal facilities to immigrants from the west as it had been giving to immigrants from the east. ## Juniors Win, Seniors Lose, In Soccer League Games

### One More Win For Redcliff In Junior Soccer

GAME WAS CLOSE ALL THE WAY AND ENDED 1 TO 0 FOR REDCLIFF—GOOD CROWD IN ATTENDANCE

Redcliff's Junior soccer team added another win to their list last Friday evening, when they defeated Knox Juniors on Medicine Hat, in a league game. The score was 1 to 0.

The game started off with play slightly in Redcliff's favor, but it was not long until the visitors' defense made it quite plain that the home forwards were not going to have it all their own way. From the time the first run was checked by the visitors' defense, until the close of the first half play was very evenly contested. So much so that neither side was able to locate the net before half time.

With the ground more in their favor the visitors started the second period with what looked like a determined effort to score. But in this they were disappointed, as the home defense was there at every turn. In fact, play was well advanced it looked as though it was going to be a no more game, when the final Redcliff made a nice rush. An exciting scrimmage took place just in front of the visitors' goal, and when the dust had cleared away the ball had found a haven of refuge in the net.

This was the only goal scored during the game, leaving the home team a winner by 1 to 0, and maintaining their inviolate run of success. Unfortunately for the visitors they were compelled to play one game more during most of the game, only to have the referee awarding marching orders from the referee.

There was a good crowd in attendance, and excitement ran high among the spectators.

The teams were very evenly matched, and put up a good class of ball.

Advertising in The Review brings business.

### Callies Luckily Get Two Points In League Game

VISITORS ADMIT THEY WERE LUCKY TO WIN, BUT TOOK ADVANTAGE OF THE OPENINGS OFFERED THEM

Redcliff senior football team again had the Medicine Hat Callies as visitors on Monday evening last, this time in the league competition. They were not as fortunate as on the previous occasion, suffering defeat by three goals to none. To put it mildly the result was not in accordance with the run of the game, and like good sports the Callies freely admitted they were lucky to get away with the spoils.

There was a nasty win blowing over the field when play commenced and Redcliff winning the toss took advantage of it and kicked up the forwards again as in the previous game by at once making tracks for the Callies' goal, and giving the backs a hard time in the opening stages. The home forwards swarmed round the visitors' goal, but try as they would they were unable to locate the net, the ball being sent past the posts at least four occasions when a goal looked to be coming. As it often the case the team that had done all the kicking were the first to be tired.

The Callies forwards were playing well away from their defense, and the ball being sent past the posts at least four occasions when a goal looked to be coming. As it often the case the team that had done all the kicking were the first to be tired.

goal. Try as they would the home team could not open their account, although once they had the ball in the net at least two feet from the keeper cleared, but the referee was not in a position to see, and declined to concede to the appeals of the home team.

Half time arrived with the Callies leading by three goals to none. Commencing the second half with each side tired and the wind blowing, it was anticipated that the home team would have all their work cut out to prevent the visitors from adding to their score, but the home team actually played better against the wind than they did, and a very even game was played. The home halves exchanged a greater command over the visitors forwards and worked hard to get them going, and occasionally taking a shot at goal themselves. The home forwards were not in a position to take advantage of the openings offered them, but they were up against a defense that was giving nothing away, and consequently their efforts brought no rewards.

Play was carried on from end to end at a fast pace without either side of forwards beating the net, although one shot from the Callies' left struck the up-side of the crossbar and bounced back into play. This was the nearest approach to a goal at the Redcliff end, while McLennan, who had gone forward came close with two shots at the Callies' goal, but Mac was pretty well watched by his old team mates and was not allowed to get beyond dangerous. Try as they would neither a shot of defence, and a hard fought game, in which the visitors accepted their very real chances, ended with a score of none to three in their favor.

## Scotland Defeats England Two to One

England vs. Scotland was the big game in football circles in Medicine Hat on Sunday last, when the two teams played in the evening and attracted a large crowd of spectators. Unfortunately for the success of the game a heavy rain and storm came on about half way through, when the play was very uncomfortable for both players and spectators. It was a very close, contested game, and resulted in a win for the Scotchmen by two goals to one. The Scotchmen scored their goals in the first, and the Englishmen captured their point in the second, but could not manage to draw level.

JUNIOR  
May 25—Knox vs. Redcliff.....cup

## Indians Win Again In Baseball Game

On Wednesday morning an interesting baseball game was played between the Indians and the Glens plant team, which resulted in a win for the Indians by a good margin.

Unfortunately our baseball reporter got his finger knocked out during the game and he is unable to write a full report of the play.

## Sunflower Seeds are in Great Demand

"Taking time by the forelock" has never been better exemplified than in the ordering of sunflower seeds this year by individuals and firms. So great has been the demand for these seeds to the extent of the C.P.R. has been caused by the enormous popularity of the seeds. The seeds have been sold by seed firms now entirely exhausted. Although the quantity of sunflower seeds sold by these companies this year was at least 200 per cent greater than last year, it has not been nearly sufficient to meet the demand and further supplies are now being sought in Eastern Canada.

## Rights of Wife Defined by Court

The rights of a wife under the Dower Act have been defined by the following decision of the appellate court. "The appellate division of the supreme court has just handed down its decision in favor of the claimant in the case of Johnson vs. Johnson."

"By special leave of the appellate division the following case was submitted for the decision of the said court:—

"On the sheriff, acting on behalf of an execution creditor, and without the registered owner, which is the execution debtor without the consent of the wife of the execution debtor (the land being the execution debtor's homestead as defined in the Dower Act) a sale upon a sale of the said land by the sheriff under the Dower Act, and the purchaser thereof shall receive a transfer which can be registered in the land titles office free from encumbrances or claim by the wife of the execution debtor, if the said land under and by virtue of the Dower Act."

The judgment of the court was delivered by Mr. Justice Brien and Mr. Justice Stuart. Mr. Justice Brien held that the interest of the wife in a homestead under the Dower Act is a life estate after her husband's death, that is, a continued interest; and that it is not subject to be devolved by testamentary disposition of the husband or by an intestate. The purchaser under the Dower Act is not to acquire the land and not a certificate of title, therefore only subject to the wife's continued life estate. I would therefore reverse the execution submitted by leaving that the homestead of the wife sold under execution by the husband, and not subject to the ultimate contingent life estate of the wife."

The same-day mail from May 19 to 23 has been an indication from a seedling standpoint in Western Canada.

## Canada is Gaining Cuban Hay Market

United States hay producers and shippers are losing the Cuban hay market to Canada, according to Department of Agriculture officials. In a speech delivered at the annual meeting of the National Hay Association, Mr. Newton said that the Canadian hay market is growing rapidly because of the high railway rates and lack of interior waterway transportation facilities. They could not compete in the Cuban market with Canada, which is sending large shipments to Cuba by water.

## Will Economize in Provincial Police

It is quite possible that the Alberta government may not appoint a successor to Commissioner of Provincial Police Alfred Cuddy, resigned, but instead may merge the functions of that office with the one of superintendent of provincial police, now held by Inspector Bryan.

Mr. Brownlee declined to make a statement on this subject, that the office of commissioner of provincial police may be abolished, and an authoritative source, however, it is learned that the attorney of the province has no particular reason for having dual heads of the provincial police, and that the province is not inclined to do so, and that the act be the duties of both offices.

## Illicit Use of Drugs in Increase

Illicit use of drugs in Canada is on the increase. Hon. Dr. H. B. Ireland, minister of health, told the commonsense of the House of Commons that the use of drugs is increasing at an alarming rate.

The government asked \$155,645 to enforce the drug and drug act this year, an increase of \$85,000 last year. The officials had been engaged for Dr. Ireland stated.

## Revision of Freight Rates is Desirable

"The Canadian Pacific Company agrees," declared E. W. Beatty, president of the Canadian Pacific Railway, that the special house committee on railway transportation costs, "that a revision downward of rates is desirable, and is being prepared with the approval of the railway commission, to put the rates of the C.P.R. on a par with those of the other railways in the country."

The committee before which Mr. Beatty made his statement said that such reductions will largely affect its revenues, and that the railway companies are in a position to make substantial reductions in operating expenses. The committee before which Mr. Beatty made his statement said that such reductions will largely affect its revenues, and that the railway companies are in a position to make substantial reductions in operating expenses.

Mr. Beatty's declaration came at the close of a lengthy statement, in which he reviewed the whole commercial situation of the C.P.R. and its management.

## Could Bring 400,000 Ukrainians to Canada

A proposal guaranteeing to bring to western Canada within three years 400,000 settlers picked from among the agricultural people of eastern Galicia and Bukovina in central Europe has been submitted to Charles, Stuart, minister of the interior, by Andrew S. Shandrew, former member of the Alberta legislature for Wilfrid, Mr. Shandrew stated that the minister looked favorably upon the idea, expressing the opinion that examination of the immigrant should be made near the point of departure from the point of termination of his journey. He promised to get more at length into the proposal when the session is over and to discuss it with the cabinet.

The farmers of Prince Edward Island have had considerable success in selling for export polished seed, and certified seed potatoes of the best quality. This year the demand for island-grown seed, whether for grain or potatoes, greatly exceeds the demand.

### Cure For Hard Times.

Business conditions in Canada are not good at the present time, and, while this Dominion is probably in better shape than most countries, that in itself is poor consolation. Instead of endeavoring to find excuses for present conditions, the chief business of every individual citizen should be to find a remedy and effect an improvement. And the hopeful feature of the situation is that an improvement is not contingent on what Governments, Banks and big financial and industrial corporations may, or may not, do. Betterments will be the result of the actions of individuals.

Somebody made the remark a short time ago that hard times had come. This is Western Canada who says that the person making such a remark was in error, and that he should have said "soft times have come." We are not so sure that even this is the correct way of putting it. Rather we would say that too many people are acting on the assumption that soft times have come.

There is only one remedy for the existing economic ills from which all are suffering, and that is work. Not work a few, but work by all. Not a minimum of work, but the full maximum of work of which one is capable. Not work as it is advocated by the six-to-eight hour day, five days a week, agitation, but work as the banks go to "do." What are the manufacturers, the railways, the Governments, the farmers, going to do? But in no single instance did he hear a business man or artisan say what *HE* was going to do. There is, as this man said, a mighty serious epidemic of "let George do it" sweeping the country at the present time, and many business men have the disease in a more or less virulent form.

Commenting on the situation as this man found it, a writer in one of the trade journals says: "It has got so that the popular indoor and outdoor sport of today is 'passing the buck,' and yet we are wondering what is the matter with business. We are all waiting for the other fellow to start something, and feel deeply offended when he fails to make the first move. The result of the world has grown so used to play that it cannot settle down to work. The loss is talking and thinking golf. In a few weeks he will be playing golf, and his employees passing themselves off as golfers. The newspaper, again, the best part of her short working day planning what she will wear to the next dance. The office boy is wondering how many grandmothers he will be able to satisfy by during the baseball season. It is the aftermath of the loss of the game, under the excuse that he is 'keeping himself fit to play more golf.'"

"There's nothing wrong with business that I can see," said this observant traveler, "but there is a whole lot wrong with business men. Too many people are drawing their pay and their breath, and that is about all they do—draw—they are trying to look prosperous even if they don't feel prosperous." They are wondering, and waiting, for others to get busy while idling themselves.

It is well to remember, declares the trade journal in which we have already quoted, that success comes in cans and failures in cans. There is only one letter between them, but it makes all the difference in the world as far as results are concerned, and it is results that count.

The remedy for present hard times, or soft times, is to get away from present-day delusions, and to get back to the good old business method, namely, hard work, bending the back, bowing the head, and by the sweat of brows, coupled with the average amount of brains and general grit, things will soon right themselves.

The great present-day need is confidence coupled with energy and a will to do. Confidence in our country and in our country's institutions, but above all confidence in ourselves. It is time we quit blaming all our misfortunes and troubles on the world and the millions of other men and women during the war learned to look to Governments and semi-government institutions for clothing, food, and the whereabout in life. This was inevitable when men were taken from the ordinary vocations for military service. But the time has long since arrived when people must stop leaning on such supports, and must exert themselves and provide for themselves. Instead of relying on others to do for them, they must do for themselves. In a word, they must develop their old self-confidence and set to work for their selves.

Until all individuals realize these things, and until they learn that a confidence of so-called soft times is really means and brings about hard times, the country will wallow in the slough of business depression and unemployment.

### New Primer for Western Schools

Has Been Prepared by Edmonton Women Teacher

The children in the primary grades of the public schools are to have a new reading book and a committee of provincial primary experts met in Edmonton with John T. Ross, deputy minister of education, acting as host, the following representatives of the four western provinces were present: Miss A. Gertrude Jackson, Calgary;

for Alberta: Miss E. E. Rankin, Saskatoon; for Saskatchewan: Miss Rebecca Rogers, Winnipeg; for Manitoba: Miss Kinsley, for British Columbia.

A new primer has already been prepared and was before the committee for examination. It is the work of Miss E. M. Burnett, of the Edmonton Normal School, who bases her compilation for the primary grades according to modern ideas of what little reading books for little readers should be.

**Educational Films**  
Over 50,000 persons in Saskatchewan viewed the twentieth educational film distributed by the Provincial Government during 1921. These films, which are issued free of charge, cover a wide variety of subjects, such as pest plating, better hawks, marketing eggs, farm boys' camp, house hold science, selecting livestock, etc.

**Ontario Mineral Production**  
It is estimated that in the decade's history of mining in Northern Ontario, the various mines have contributed more than \$750,000,000 to the wealth of Ontario.

**Madie Elliott** is now the only one whose name is known by any New York theatre.

Keep your store of smiles, and your kindest thought for home; give the world only those you have to spare.

### A Shark Tannery

Will Tan Hides of Sharks at Plant on Vancouver Island

It is planned to start a shark tannery on the west coast of Vancouver Island. The plant will be on a large scale, two boats being engaged in the operations. The hide of the shark is superior quality, for use in gloves, bags, purses and shoes. A very fine oil is extracted and used for medicinal purposes. The plant is a British invention and is making gelatine. There are many sharks on the west coast, and the industry should become a lucrative one.

### DIGESTIVE TROUBLES CAUSE MUCH DISTRESS

Are Nearly Always Due to Thin Stomach

Do not think that because your stomach is easily upset you are the victim of some serious malady. One of the most common causes of indigestion is, in fact, a thin, watery blood. This in fact it has become generally recognized that healthy action of the stomach is impossible unless the blood is rich and pure.

Dr. Williams' Pink Pills have been found valuable in cases of indigestion, nervous dyspepsia and stomach weakness, just because they are a blood builder and nerve tonic. The rich, red blood following their use not only insures a healthy digestive system, but gives vigor to the nerves. One important point to remember is that Dr. Williams' Pink Pills contain no harmful drugs or opium, and are thus safe to be preferred to preparations that merely stimulate for a time.

For a long time I was a sufferer from indigestion, and I was sure that you begin worrying unnecessarily about it. I was sure that the tonic treatment of Dr. Williams' Pink Pills would be of benefit to me. I was sure that my appetite would return and my defecated system would revive.

### Artificial Daylight

Surprising Results are Obtained by Use of Special Colored Glass

One of the most interesting problems in illumination is to provide an artificial source of light which will not only reproduce ordinary daylight, but which is also a health factor. Such a source of light is invaluable in the textile industry and for the maintenance of color.

The desired result is to filter the light of an electric or other lamp through a transparent substance which will not only reproduce ordinary daylight, but which is also a health factor. Such a source of light is invaluable in the textile industry and for the maintenance of color.

## Rheumatism Is Now Gone And Wellington Walks Well As Ever

"I heard so many people telling me that I had died, and I tried it in my own case and I convinced it is a wonderful medicine," said David Wellington, a well-known drug clerk, Harpers, Manitoba.

"For five years I had been suffering from rheumatic fever. I simply ached all over from head to foot and my bones felt like they were going to crack. My knees were so stiff actually I used to walk like a hot wooden leg, and I just dragged one foot after the other."

"Everything I ate seemed to hurt, and I was so weak I was bothered a good deal with backache and headaches."

"I began to improve gradually from the first dose of Tonic and kept it up until my stomach was in perfect condition and the rheumatism had left me. I am in splendid health now and feel that it is only right that I should tell my experience so that others who suffer as I did may know where they may get relief, too. Tonic is sold by all drug druggists."

## CORR Lift Off with Fingers

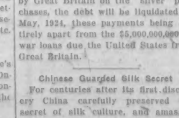

Don't hurt a kid. Drop a little "Frenum" on an itching cough. Instantly it cuts down the irritation. You lift it right off with fingers. Try it. Your druggist sells a tiny bottle of "Frenum" for a few cents, sufficient to remove every irritation from the throat or from between the toes, and the calms, without soreness or irritation.

## ONTARIO HOMER HELPS DAUGHTER

Hamilton, Ontario.—When my daughter was three years old, she was afflicted with a skin disease. It was a terrible case of eczema, and she was in great pain. I tried everything I could think of, but nothing seemed to help. Then I heard of a medicine called "Homer's Ointment." I bought a bottle and used it. In a few days, the skin began to clear up, and in a week, the disease was completely gone. My daughter is now a healthy, happy child, and I am a very grateful father.

## BRITAIN PAYS AGAIN

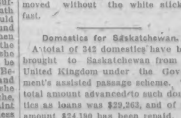

U.S. Receives Second Installment of Silver Bought During War  
Payment of \$19,672,500 by Great Britain as the second installment on the debt of \$125,000,000 created by the Government's purchase of silver during the war has been reported by the Treasury. The first installment of \$10,000,000 was paid in May, 1921.

## CHINESE GUARDED HIS SECRET

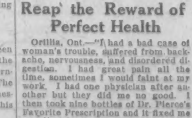

For centuries after the first discovery of China carefully preserved the secret of silk culture, and amassed great wealth by exporting it to India, Persia and Arabia.

## DOMESTICS FOR SASKATCHEWAN

A total of 241 domestic have been brought to Saskatchewan from the United Kingdom under the Government's assisted passage scheme. The first group of 100 was sent in May, 1921, and the second group of 141 was sent in June, 1921.

## PERK UP AND SMILE

Orville, Ont.—I had a bad case of woman's trouble, suffering from backache, nervousness, and a general feeling of depression. I had great pain all the time, and I had no energy. I tried everything I could think of, but nothing seemed to help. Then I heard of a medicine called "Perk Up and Smile." I bought a bottle and used it. In a few days, the pain began to go away, and in a week, I was feeling much better. I am now a happy, healthy woman, and I am a very grateful mother.

## Swinging Of Pendulum Will Now Be Used For Locating Oil Or Gas

We have all stopped here a clock and watched the pendulum go to and fro, and tick off the seconds of time in its ceaseless work. Why it ticks off seconds, we probably do not know, but, furthermore, we do not care. We simply know that it is its business to do so. However, there is a reason: It is dependent upon its length, and the pendulum and upon the force or pull that causes it to oscillate. If we change its length, the period will be different, or if we change the force or pull, retaining the same length, the period will again be different.

The pull or force is essentially the attraction of the earth upon the displaced body, the pendulum, so that if we allow a pendulum of variable length to swing in different parts of the earth and note the number of swings it makes, say in an hour, or a day, it will give us a measure for determining the difference of pull or attraction of the earth in any one place, that it would tell us the relative distance that we are from the centre of the earth, and the stations of observation. From this it is obvious that the figure or ellipticity of the earth may be found by means of the pendulum.

The figure and rotation of the earth affect the pendulum in two distinct ways. In the north, where the earth is going southward, say from Ottawa to Washington, we get a little farther away from the centre of the earth on account of the curvature of the earth. Then, furthermore, at Washington the centrifugal force is greater, there is a greater tendency to swing away from the centre, and the pull at Ottawa is greater than it is at Washington.

It may be observed that this, weighing his gold in the Yukon by means of a spring balance and believing it to represent so many pounds and ounces, would naturally be surprised if he weighed that same gold with the same spring balance in Ottawa, before turning his back to the Mint, to find that it weighed less here by something like the 500th part of what it weighed in the Yukon. This is due to no fault of the scale whatever, but simply that gravity is less at Ottawa than at places further north. This is one reason why spring balances are illegal as appliances for weighing. The greatest difference in gravity upon the earth is between the poles and the equator, where this difference amounts to fully one two-hundredths.

With the great many pendulum observations, or gravity observations, as otherwise called—because of the means of the pendulum—by which the gravity of the earth—distributed over many parts of the earth, besides actual lines—traversed by the earth, have been made, the figure of the earth is determined with a high degree of accuracy, so that we know the latitude we know in advance what the theoretical value of gravity should be, or, which is the same thing, we know accurately the earth in which the pendulum must have in order to swing seconds there.

The mean diameter of the earth, which is a little over five and a half times that of water, has been well determined and more so the densities of the many different kinds of rock formations and other minerals that constitute the crust of the earth, upon which the oscillations are dependent. Any change in the distribution of them will, therefore, affect the time of the oscillation of the pendulum. It is obvious that the heavier matter is more effective than less matter there, and in its attraction on the pendulum.

All this preceding is to explain and emphasize that the oscillation of a pendulum is dependent upon the distribution of matter around it and below it.

We are just now at the point of revealing what the pendulum shows and by work carried on by the Dominion Observatory. Let us here say a few words of the pendulum used for gravity observations. These pendulums have no clockwork. They swing on a scale plate supported by an acute knife-edge. The time of oscillation of a single swing is determined to an extraordinary degree of accuracy—the one ten-millionth of a second of time—the time being derived from the stars.

Hence, if we set up our apparatus at a place where latitude is accurately known, and determine the time of oscillation of the pendulum, the period is known at a given place, like Ottawa and Washington, we will find whether there is an excess or deficit of mass about the station or place. In another word, and the revolution is made. We find, for example, that the pendulum swings too quickly for that particular latitude, which would

mean that there is an excess of mass about the pendulum. Such a result would absolutely preclude the presence of oil or gas in the rock formation. This is surely something to be thankful to for. It is the business of a company about to drill for oil or gas, it means a fair story that the pendulum is quick and almost invariably swinging with equal amplitude, it is a sure indication that there is no oil or gas in any quantities present, so that the pendulum tells us positively of the absence of oil or gas.

If, on the other hand, we find that the pendulum is swinging too slowly when it is set in motion, this would mean that there is present a deficit of mass, the reason for which may be oil or gas or rock of small density so that while the pendulum is able to predict definitely the absence of oil or gas, it cannot do so with certainty. It is for this reason that the savings of thousands of dollars are usually expended in the search for oil or gas, and the pendulum is used to forecast the possibility of the presence of oil or gas.

### Sea-Orter Becoming Rare

#### Animals Only Found In Parts of North America

An animal that is becoming rarer every year and will soon be almost unknown is the sea-orter.

These birds are very scarce and are found in parts of North America. A curious feature about them is that they are found in the Arctic regions, where they live in pairs. The female searorter is a very good mother and will fight for her young when attacked by the hunter.

The Eskimos have adopted a very ingenious device for finding out the whereabouts of the sea-orters. They staked a number of bells from posts and connect them by means of string with a chain of bells, the end of which forms the animal's haunts. Consequently, when an enter is approached she moves the string and the bells to warn the hunters.

Sea-orters are generally killed while sitting on the ice for the top of the water. The animals sleep with their backs with the young enters in their pairs in the same way that many birds do.

Other fur, which is highly prized especially in China, is becoming very difficult to obtain.

### One Beauty of Winter

#### Snow Acts as Silencer and Gives Relief from Noise

One beauty of a Canadian winter is that it deadens noise. The snow comes and puts a finger on the traffic on the streets, and the double windows aid it in keeping out noise. It is said that those who live in the city also keep out the dust, but perhaps that is offset by the fact that the furnace is kept in a better state of repair.

Just think of this now the spring we come and the time almost for no more snow and no more double windows, and later on ponder over Chrysler's words: "That which would torment one in winter is noise. It is the devil's own infernal, din all the blessed day long, confounding God's work and His creatures, a truly awful combination; and the worst of all is a railway whistle, like the scream of a demon, and every car as big as a cathedral."

And then try to prevent as many unnecessary noises as you can—King's Sound.

"Old Prodigy Purified"  
The marriage of Princess Mary and Vincent Lascelles will hold a curious old prophecy, of which few people are aware. More than 115 years ago, in 1770, it was said that one day the daughter of a king would be found in the arms of a sailor and would wear the famous jewels of that house. That is now coming true, for Lord Lascelles' mother was of that family, and it was from his uncle, the late Lord Lascelles, that the bridegroom inherited not only a comfortable fortune, but the famous gown which Princess Mary is entitled to wear.

The fact that pure sweet milk is one of the most wholesome and nourishing beverages has led to much of the trouble and a method of preserving it. A patent has recently been granted for a process of preservation by which milk is converted into an inviolable beverage which may be kept for long periods, much as the new beer is kept or ginger ale—From the May Popular Mechanics Magazine.

## International Science Conference

### Canada Will Be Well Represented at Meeting in Rome

When it was decided to hold an International Science Conference at Rome in May of this year, the National Committee of Canada selected five delegates, three of whom are being sent to the conference by the respective departments of the Government service. These are Dr. Otto Kluge, Director of the Dominion Observatory, representing astronomy; Dr. E. Deville, Survey Superintendent; Dr. W. Bell Dawson, General Superintendent of the Tidal and Current Survey, Department of the Naval Service, Ottawa.

In explaining the scope and work of the International Science Conference, Dr. Dawson states that at the time that the League of Nations was formed in 1919, there was held in London an International Union of Geodesy and Geophysics. The League of Nations was formed in 1919, there was held in London an International Union of Geodesy and Geophysics.

At this was held in London an International Union of Geodesy and Geophysics. The League of Nations was formed in 1919, there was held in London an International Union of Geodesy and Geophysics.

"Astronomy in Canada is carried on extensively by the Dominion Government, and the Dominion Observatory is in Ottawa, and an Astrophysical Observatory at Victoria. The subject is also supported by the Royal Astronomical Society which has its headquarters at Toronto. It is thus quite fitting that an international committee representing astronomy should be formed in Canada."

"The International Geodesy and Geophysics Commission, which is still more comprehensive. The work carried on under this heading by the Dominion Government, and the Dominion Observatory, in the direction of four different departments. In the Department of the Interior, there is a Topographical Survey under the Survey-General, and a Geological Survey of Canada, including Trigonometry and Levelling, and also the investigation of earthquakes and terrestrial magnetism under the direction of the Dominion Observatory. In two other departments, there are the Geological Survey, and the Meteorological Service for the study of climate."

In the Naval Service Department there is the Hydrographic Survey, engaged in making charts of the coastal regions and the Great Lakes; and the Tidal and Current Survey, which includes the investigation of the tides on the eastern coast of Canada and on the Pacific, as well as in Hudson Bay.

The National Committee of Geodesy and Geophysics for Canada includes the men at the heads of these various branches in the Government service, as well as a professor in one of our best universities, making ten in all.

The X-ray is used in asacoustic construction to detect defective machinery, weak metal castings and workmanship, which would otherwise escape the eye of an inspector.

THAT BOB DOESN'T KNOW WHAT HE CAN MAKE OF IT, JACK CAN TAKE CARE OF IT. IT'S HIS TURN FOR ME!

"The marriage of Princess Mary and Vincent Lascelles will hold a curious old prophecy, of which few people are aware. More than 115 years ago, in 1770, it was said that one day the daughter of a king would be found in the arms of a sailor and would wear the famous jewels of that house. That is now coming true, for Lord Lascelles' mother was of that family, and it was from his uncle, the late Lord Lascelles, that the bridegroom inherited not only a comfortable fortune, but the famous gown which Princess Mary is entitled to wear."

The fact that pure sweet milk is one of the most wholesome and nourishing beverages has led to much of the trouble and a method of preserving it. A patent has recently been granted for a process of preservation by which milk is converted into an inviolable beverage which may be kept for long periods, much as the new beer is kept or ginger ale—From the May Popular Mechanics Magazine.

### Monster Berg from Frozen North

A strange sight has been witnessed in mid-Pacific.

For the first time, as far records go, an iceberg has floated from the frozen north right down the Pacific into the region of the tropics, and has been seen off Hawaii by a Japanese liner that was on its way to San Francisco.

The Shinyu Maru was exactly one day's journey out of Honolulu when the monster, Captain Makl, saw the iceberg. At first he could not believe his eyes, and supposed that it was a particularly large whale, but when he turned his glasses upon the object, the fact was evident that it was a New York writer who was on board, said others on the vessel, confirmed the fact, and now scientists are trying to explain the iceberg's presence in this unusual quarter of the globe.

It is supposed that an exceptionally gigantic berg broke off from the Arctic ice-pack, passed out of the Bering Sea, and was caught by the North Pacific current after successfully rounding the Aleutian Islands.

Of course, as it travelled through the warmer waters it must have gradually melted, but its immense size and shape enabled it to travel as a great berg. Capt. Makl estimated its length when he saw it at about two hundred feet.

It would be interesting to know its former history, but in any case, it cannot have long survived after reaching tropical seas.

### Bulgarian Women Working Much to Restore Country

Even King Boris' two sisters, the Princesses Davidka and Nadejda, will be obliged to contribute their share to the Bulgarian state under the new compulsory labor law, which requires all women up to 30 years of age to serve at least 10 days of their time every year in useful work to the community.

This ruling has been made by the stern Alexander, and is undoubtedly, the most powerful man in Bulgaria and maker and breaker of kings.

Bulgarian women, said the premier, will be compelled to make garments and bed linen for hospitals, conduct useful labor in orphanages and asylums, help to care for the poor and so on. Girls under 20 years old will be obliged, for a period of three months each year, to study domestic science and the useful arts, as well as to perform other useful work.

Two brigades standing in the stern of a Channel steamer. Said Makl: "Oh, can't see how the captain finds his way across the Channel all this time. Now, if we were going the other way he'd have to follow the white streak of foam there. But if he goes up the other end of the boat, he'd fold there's never a mark to go by—Way-side Tales."

### Will Provide Help for Farmers

In anticipation that between 2,000 and 2,500 men will be required for settling operations on the farms in Saskatchewan, the Bureau of Labor will be organized, for a period of three months each year, to study domestic science and the useful arts, as well as to perform other useful work.

Two brigades standing in the stern of a Channel steamer. Said Makl: "Oh, can't see how the captain finds his way across the Channel all this time. Now, if we were going the other way he'd have to follow the white streak of foam there. But if he goes up the other end of the boat, he'd fold there's never a mark to go by—Way-side Tales."

The Shinyu Maru was exactly one day's journey out of Honolulu when the monster, Captain Makl, saw the iceberg. At first he could not believe his eyes, and supposed that it was a particularly large whale, but when he turned his glasses upon the object, the fact was evident that it was a New York writer who was on board, said others on the vessel, confirmed the fact, and now scientists are trying to explain the iceberg's presence in this unusual quarter of the globe.

It is supposed that an exceptionally gigantic berg broke off from the Arctic ice-pack, passed out of the Bering Sea, and was caught by the North Pacific current after successfully rounding the Aleutian Islands.

Of course, as it travelled through the warmer waters it must have gradually melted, but its immense size and shape enabled it to travel as a great berg. Capt. Makl estimated its length when he saw it at about two hundred feet.

It would be interesting to know its former history, but in any case, it cannot have long survived after reaching tropical seas.

### Track Meet At Saskatchewan University

High School Boys from All Over the Province Will Attend

High school boys from all parts of the province will attend a track and field sports at the University of Saskatchewan on May 13th, when the first provincial high school day will be held under the auspices of the Athletic Directorate of the University.

A similar meet is conducted in Eastern Canada by McGill University with great success, and contests of the same kind are held at most of the State Universities.

Interest in the meet seems to be widespread, and from a town as far away as Saskatoon, Mr. Herbert has some word that a team of six or seven boys will be sent. The net receipts at the meet will be applied to the travelling expenses of the competitors, and the boys will in Saskatoon will occupy rooms in the University Hotel.

On February 4, 1922, the old Fort Prince of Wales, which occupies the best peninsula at the mouth of the Yukon, was destroyed by fire. It was placed by order in command under the control of the National Parks Branch of the Department of the Interior, and will henceforth be preserved as one of the chief historic memorials of West-North America. The old fort had the distinction of being the most northerly fortress on the American continent, and at the time of its completion, in 1745, was the strongest fort in North America, not even excepting Quebec.

According to the original plans the walls were to have been 45 feet thick, but, owing to some objection on the part of the Governor they were first built 25 feet thick. This, however, was judged inadequate, after a certain amount of heavy gun practice, and the original design was followed down and rebuilt according to the original specifications. The fort contained 40 guns, carrying from 6 to 24 pounds.

In August, 1782, Samuel Hearne, the Hudson's Bay explorer and Governor of Fort Churchill, received the astonishing information that England and France were at war, and that the British had been driven from the fort. He was then in a force of 400 soldiers, was walking out of the fort for his surrender. As a few private soldiers, the old fort will receive the attention and care from the National Parks Branch that are better deserved by the old fort.

And that the old ruin, with the fifty acres of land attached, will become an important part of the national scheme of Dominion parks.

ORGANDIE DRESSES \$16.45

#### Gingham Dresses SPECIAL PURCHASE AT \$4.95

Big shipment just received.  
Smart new styles; all sizes.

#### Big assortment of Gingham

at 30c, 36c and 54c per yard.  
**New Voiles**  
at 75c, \$1.00 to \$1.25 per yard.

### ITEMS OF LOCAL INTEREST

Crop reports this week are to the effect that wheat seeding is now probably finished in Alberta.

Medicine Hat has decided to proceed with the work of laying out a municipal golf course.

Chong Fung, who has been hospitalized for about for his health, returned home this week.

The 1st regiment, Alberta Mounted Rifles, will go into training at Medicine Hat, probably about July 3rd.

Mrs. Geo. Gibson received word today of the sudden death of her father at his home in the States.

Rev. C. F. Orman will attend the meeting of the Anglican Synod to be held in Regina next week. He will be away all week.

Don't forget the ministerial show in the Amuse-U House next Monday evening, under the auspices of the A. S. Society of St. Mary's church.

The secretary of the G.W.N.A. will be in the club room, Saturday evening, for the purpose of receiving dues from any new members who have been accepted up to this time.

We call generally figure on Empire Day setting the pace for summer weather, and yesterday was no exception. The last two days have been of the red old sunny southern theta weather.

As we go to press we learn that the funeral of the late Mrs. John Young will take place from Garden Memorial church on Saturday afternoon at two o'clock. The remains will be interred in Redcliff cemetery.

Mr. Fitzhugh, of this town, and W. Leiden, of Howell, are contemplating drilling for oil in the Howell district. Mr. Fitzhugh was in Howell this week going over the ground and making preliminary arrangements.

On Saturday afternoon, June 17th the Junior Branch of St. Ambrose W.A. will hold a sale commencing cooking and candy on the vicarage grounds. Afternoon tea and ice cream will be served.

Tuesday, June 6th, is a date to remember. On that evening the young people from St. Ambrose church, Medicine Hat, will host a whole evening of entertainment under the auspices of St. Ambrose church. The proceeds go to the building fund of the local church.

On Saturday afternoon of this week (May 27th), at 3 p.m., the Will Workers' Mission Band are holding a special meeting, when the members are entertaining their mothers and friends, and displaying the gifts which they have prepared to send to one of our mission hospitals. Mrs. (Rev.) J. A. Claxton, of Medicine Hat, Provincial president of the W.M.S., will be present and give an address. The mothers of the band members are specially invited and any other interested friends will be cordially welcomed.

### Headley Defends the Actions of Department

At a meeting in Lloydminster, Hon. Geo. Headley answered questions aimed at his department by J. E. Lowry, a former member for that district. Mr. Lowry complained of the elimination of the cream buying stations, of pasture leases to sheep, and demonstration farms.

Mr. Headley explained his stand in regard to the compulsory doing away with the cream stations as the interests of the industry; regarding the sheep, he assured them he believed every farm, but did not believe in the indiscriminate importation of sheep to eat the grass that should be saved for the use of the people of the province.

Regarding the demonstration farms, the minister stated he would wipe them off the face of the earth, believing that better service could be given by agricultural agents who would advise with the farmers on their own farms. He would only retain a few plots for experimental purposes at each farm and a house for the agent at that center.

The shutting of the two agricultural schools meant a saving to the province of \$15,000. The attendance at the six schools could be cared for in three, said the minister.

Wheat Board Not Yet Disposed Of

The report of the agriculture committee to the house respecting the formation of a wheat board apparently has not yet been disposed of to the satisfaction of members of the committee. The report of the sub-committee which was adopted Tuesday morning by the main committee, is to be considered at a further meeting of the committee to be held on Friday. It was learned, and it is likely that the committee will be held on Friday, it was learned, and it is likely that the committee will be held on Friday.

### Hail Insurance Rates Are Not Fixed Yet

Hail insurance rates under the municipal plan are not fixed until between September 15 and October 3. This was the statement of E. H. Maclellan, chairman of the provincial hail insurance board. Some little confusion has been caused by a statement in another paper that there would be no increase in the rates this year. "It is impossible to say until the dates mentioned when the rate this year will be," he said. "It will entirely depend upon the losses sustained."

Mr. Maclellan made it clear that the hail insurance board had nothing whatever to do with the rates fixed by the insurance companies. Those were fixed in advance. It is understood that they will be the same in Alberta as last year, which varied from 7 to 9 per cent. The rates have been increased in some parts of Southern Saskatchewan, the companies claiming that this was the outcome of their experience covering a number of years.

Medicine Hat baseball team defeated Calgary in both games played in the Hat on Wednesday.

### Awning Made Repaired and Put Up

A complete line of Awning material samples carried.

We can give you a price on all classes of small and large awnings.
